

High School Engineering Girls in STEM Research Camp

This 4 day camp will be taught by Dr. Rika Carlsen and will offer girls an in-depth research experience in the bio-medical engineering field.

This hands-on research camp will offer each student one-on-one attention and allow them to truly have an immersive research experience.

Topics covered during the research camp will include: material testing, computer simulation, computer-aided design, 3D printing, traumatic brain injury and more.

**Grades: 9-11
Max Enrollment: 4**

To register:
Submit registration form as well as questionnaire.
